

ZHEN SEA INTERNATIONAL LLP

CORPORATE PRIVACY AND DATA SECURITY PROTOCOL

Document Ref: ZSI/PP/2026-V1

Security Classification: High Assurance Corporate Data Standard

Effective Date: July 16, 2026

Compliance Status: Global Standard Ready

DATA PRIVACY COMMITMENT: Zhen Sea International LLP values your corporate and personal privacy. We implement programmatic security measures to shield corporate transaction details and user metrics. This policy details how we collect, safeguard, and leverage transactional and communication metrics.

1. Information We Collect

To process cross-border consignments and answer B2B inquiries effectively, we collect details in two primary pathways:

A. Direct Corporate Submission (Consignment Manifests)

When you complete an inbound query, we collect essential identifiers including:

- Legal representative full name.
- Registered corporate entity / trade name.
- Official corporate email address.
- Contact call numbers (including WhatsApp routing data).
- Target asset portfolio focus (e.g., Leather, Spices, Garments).
- Logistics parameters and target shipment metrics (volume, destination ports).

B. Technical and Traffic Metrics

To enhance our global supply chain app experience and website reliability, we automatically receive traffic markers including IP address, geographical location, browser metadata, operating system type, and referral paths.

2. How We Utilize Collected Information

The retrieved corporate metrics are utilized strictly within authorized parameters:

DATA CATEGORY	AUTHORIZED ENTERPRISE USE
Corporate Contacts & Details	Compiling detailed EXW, FOB, CIF, or CFR proforma valuations, managing custom clearances, and issuing sales manifestations.
WhatsApp & Call Numbers	Real-time logistics status delivery, urgent custom clearance notifications, and active dispatch routing confirmations.
Site Technical Metrics	Securing the web interface, resolving system performance errors, and preventing fraudulent inquiry entries.

3. Data Security and Custody Measures

We apply robust administrative, physical, and electronic security measures to safeguard corporate assets and database logs. Transmitted data is encrypted over Secured Socket Layer (SSL) standards, and database storage nodes are

guarded by strict programmatic controls. Despite robust protocols, no digital system can guarantee complete immunity against external cyber events. We urge buyers to safeguard official trade communication credentials.

4. Global Data Sharing and Third-Party Routing

We do not lease, trade, or distribute your corporate identifier databases to unverified third-party advertisers. Information is only shared under active business necessity, such as:

- **Sovereign Customs Nodes:** Sharing mandatory compliance datasets with India's ICEGATE interface, HM Revenue & Customs (UK), or US Customs and Border Protection for formal clearance.
- **Maritime Shipping Lines:** Transferring container booking data to partnered logistics channels servicing major port nodes like Felixstowe, Southampton, LA, Hamburg, or Rotterdam.
- **Sovereign Mandates:** Disclosing information if required by court orders, anti-money laundering regulations, or direct directives from authorized Indian or global enforcement bodies.

5. Your Legal Rights and Controls

As a global enterprise partner, depending on your geographic location (such as the United Kingdom or European Union under GDPR, or Indian Digital Personal Data Protection Act regulations), you have rights including:

- **Right to Review:** Request copies of the corporate identifiers stored in our system.
- **Right to Rectify:** Ask us to correct any outdated or incomplete business contacts.
- **Right to Erasure:** Request the deletion of inactive communication data from our system logs.

6. Third-Party Web Links

Our Site may contain links directing users to third-party stores (like Google Play or Apple App Store links for our global applications). We do not administer the privacy standards of external nodes, and we encourage you to review their local privacy parameters upon landing.

7. Updates to the Privacy Protocol

This privacy document is subject to amendments to maintain regulatory alignment with global trade regimes. The updated date will reflect under the document metadata section.

8. Privacy Inbound Support

To request data erasure or to rectify any submitted corporate contact, please route an official notice to our primary inbox:
